## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 2, the preamble of the claim renders the claim indefinite since they are not identical. The preamble states "A hollow outer half cylinder according to claim 1..." however, the preamble of claim 1 is directed to a device consisting of a variety of items. Therefore it is not clear if the applicants intend the claim to be an independent claim or a dependent claim. The applicant is advised that the proper way to claim a dependent claim from claim 1 would be: "A device of claim 1, wherein the hollow outer half cylinder..."

Furthermore it is unclear which cylinder is being referred to by the phrase "the half cylinder" since there are two half cylinders in the applicants device (a hollow and a solid one).

The same rational as stated in claim 2 is applied to the remainder of the claims and their respective preambles.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Glidden '455. Glidden discloses an educational device containing all of the elements of the claims including a hollow outer half cylinder (figures 3 and 28, element f), a solid inner half cylinder (read onto element f' shown in figures 3 and 28) where it is considered the shell f' is a solid form as it is inherently manufactured of a solid material. The ability to rotate about a common center between the two half cylinders is inherent in the device as shown in figure 28, in other words the shells f and f' can rotate relative each other about a common center (a center running down a central axis A shown below). Individual slices that can be attached to the inner cylinder making a complete 360-degrees cylinder are shown in figure 28 and below separated along axis c2and c3.

The educational aspect of the device, as required by claim 8, is described in page 1, lines 65-74.

***Allowable Subject Matter***

Claims 2-7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
